**USAID/OFDA Responds to Tropical Storm Erika**

Although the National Oceanic and Atmospheric Administration (NOAA) forecast a below-average 2015 Hurricane Season for the Atlantic, it only takes one storm to cause serious damage.

On Thursday, August 28, Dominica learned this the hard way, when Tropical Storm (TS) Erika passed over the island nation, dumping 12 inches of rain in nine hours. The result was overflowed rivers and landslides that swept away homes and destroyed roads and bridges all over the island.

"I have never seen rain like that before" said Disaster Risk Management Specialist (DRMS) Cecil Shillingford who was stationed on Dominica.

The National Emergency Operations Centre (NEOC) has confirmed 12 deceased, 22 people missing, and 20 injured. NEOC also lists that there are 574 people homeless and 713 individuals had to be evacuated from their homes in the Petit Savanne area. As of mid-September, eight shelters

are open, housing over 400 people.

The Caribbean Disaster Emergency Management Agency (CDEMA) puts the initial estimate of the damage to roads and bridges at \$226 million.

In response, USAID/OFDA immediately activated four surge capacity consultants, to help with damage and needs assessment. Regional Advisor John Kimbrough and DRMS Audrey Mullings also traveled to Dominica to lead the response.

In partnership with the Dominica Red Cross, USAID/OFDA donated

emergency supplies for affected families. Such supplies included emergency kitchen kits, gas kitchenettes, mattresses, building tools, emergency generators, cleaning supplies, hygiene kits, and some first-necessity food items.

The beneficiaries of this donation had to evacuate their homes in Petit Savanne, and are currently occupying temporary shelters in the capital, Roseau.
